Sand Bedders

650 S-P

“CUSTOM BUILT EQUIPMENT -- BUILT TO LAST!”

1200 S-H

Whatcom Sand Bedders are a specially designed heavy duty bedder built to handle the extra wear and stress sand can do to a machine.

We make them in different sizes and have different options to accommodate every dairies needs. Works very well with sawdust, shavings, manure, solids, sand, ect...

Sand models come standard with WR78 HD floor chain, 3/16" floor, with a poly plastic floor liner to eliminate floor wear. Heavy duty Aircraft tires, and heavy wall tube and frame make for a very robust machine.

The standard front unload P model machine uses the tractor PTO for the discharge belt drive, and the tractors hydraulics to run the floor chain. This is standard on the 500-650.

The H model is an independent hydraulic system, the tractors PTO runs a pump that feeds fluid from the wagons hydraulic tank, through a flow control for the floor motor to regulate the amount of sand to be spread. This is standard on the 1200.

A high speed cleated belt pours sand clear to the front of the stalls and reduces airborne dust for better operator conditions. Saves time and cuts down on wasted sand material. No need to rake or shovel bedding to the front of the stable.

Works equally well with sawdust, shredded wallboard, compost manure, wood chips, sand and chopped straw.

500 S-P

If your application requires a custom built machine, Call or Email us with your details and we can provide a quote. Custom machines are not a problem!

MODELS	500	650	850	1200
Capacity (cu. yd.)	5	6.5	8.5	12
