

# WHATCOM FERTILIZER SPREADERS

## Narrow Profile Berry Model

NP-300

**WHATCOM MANUFACTURING'S** Stainless Steel Fertilizer Spreaders are specifically designed for the BERRY grower. Extra narrow width and higher capacity will accommodate mature fields and minimize time and trips required to cover larger acreage plantings. Our twin belt discharge evenly spreads fertilizer on two rows simultaneously. This feature in conjunction with the ground driven floor chain provides for concise application rates regardless of ground speed.
